The **Corsican authority** is a joint founding member of **Capenergies** and is committed to the energy transition. Under the leadership of the **Corsican Economic Development Agency**, the authority offers ongoing support to help innovative carbon-free energy projects get off the ground, from initial concept through to project assembly. Its aim is to transform ideas into marketable products and services for the residential renovation, eco-construction and renewable energy production and integration markets.

BUILDING YOUR SUCCESS TOGETHER

“Even before we founded our company, Capenergies helped us develop a robust business model by certifying our research subjects. Now, Capenergies gives us the tools we need to promote our company, establish our position in the regional ecosystem and look to international markets. It's a superb framework that allows us to grow our reputation and build fruitful working relationships.”

Pascal Boulanger, CEO, NAWATechnologies

“Capenergies has played a major role in driving Optimum Tracker's growth. As a result, we're now one of the leading French companies in our industry and we're establishing a strong position in a fast-growing global market. I'm particularly impressed by Capenergies' subject-matter expertise and its ability to deliver hands-on solutions that work – exactly what small businesses and SMEs need if they want to expand.”

Yacin De Welle, Co-founder and CEO, Optimum Tracker

“Capenergies gave us essential advice and helped us put together public funding applications for our photovoltaic screen and solar textile projects. We couldn't have managed without it. Thanks to the help we received, we now have a bright future and are looking to expand into new markets.”

Ludovic Deblois, Co-founder and CEO, Sunpartner Technologies

“Provence-Alpes-Côte d'Azur is the winning region of the national smart grids deployment call for projects. Flexgrid's submission involved players from the education, research and innovation sectors, alongside competitiveness clusters, businesses and local authorities from the PACA region. Capenergies involvement in the Flexgrid project is great news for our local companies and our territories, confirming the vibrant business landscape in our region”

Bernard Kleynhoff, President of the Nice Côte d'Azur CCI, President of the Provence-Alpes-Côte d'Azur Regional Council's Commission For Innovation, New Technologies and Digital Industry.

Capenergies®

THE ENERGY TRANSITION CLUSTER

Capenergies is helping to:

- drive the **energy transition**, establishing a new energy model in France and offering hands-on solutions to replace fossil fuels, to meet supply challenges by reducing energy demand, and to tackle climate change,
- make **French businesses more competitive** by developing regional or national energy sectors and transforming our high-level research into marketable products and services.
